Report prepared under the World Bank, NACA, WWF and FAO Consortium Program on Shrimp Farming and the Environment. Work in Progress for Public Discussion. Published by the Consortium. 182 pages.

Abstract

The case study is based on review of existing publications/reports as well as results arising from the conduct of selected participatory consultations among concerned stakeholder at different levels – from national to local level.

This report is divided into three main sections, namely: 1) Background review on shrimp aquaculture in Bangladesh. The review was used to identify specific issues, and formed the basis for the more detailed research. 2) Results from a case study of farm management practices, hatcheries and wild shrimp fry collection and 3) Results from a case study on the social aspects of shrimp aquaculture, based on detailed local level studies in the Khulna region.
